SRINIVAS BONTULA

SSB597

PROBLEM **DESCRIPTION**

- Cricket statistics are based around individual measures, from a batsman's average to a bowler's strike rate.
- But what matters the most is the runs scored or wickets taken, when placed in a context.
- A series played on bowler-friendly pitches might deflate the career averages of the batsmen involved, but that dip fails to account for their performances relative to the conditions.
- **Batting Averages and Bowling Strike rate, don't tell the full story.**

COURSE SCOPE

- The concepts learnt in the course such as function decorators, function call overheads, itertools, multiprocessing, other python inbuilt functions and packages were applied for the following steps –
 - Web Scraping – [BeatifulSoup, itertools, functools, geocoder, multiprocessing]
 - Modifying the datasets – [pandas, itertools]
 - Designing the algorithm – [numpy, itertools, math, pandas]
 - Predicting the teams – [threading, numpy, itertools]

DATA COLLECTION

- Web Scraping of the cricket websites -> Cricinfo and Howstat
- Requests -> For asynchronous calls to the website.
- BeautifulSoup -> For parsing the HTML webpage. (navigating, searching, and modifying)
- Multiprocessing -> Extracting the data series wise.
- Partial -> To solve the global variable issue.

OUR APPROACH

A series is a fair unit to use to break down careers. The numbers of a bowler or batsman over a series are self-contained indicators of performance that are also somewhat normalized for conditions.

Adding weights to the runs based on the time period of the series to curb the scoring trends, along with the host nation of the series.

Instead of looking at raw runs, wickets and averages over a series, we will try to look at the relative standing of a player in the run charts in a particular series, and average that over his whole career.

WHY DIFFERENT TIME PERIODS?

- 0 - [1971-1980](#)
- 1 - [1981-1985](#)
- 2 - [1986-1990](#)
- 3 - [1991-1995](#)
- 4 - [1995-1999](#)
- 5 - [2001-2005](#)
- 6 - [2006-2010](#)
- 7 - [2011-2015](#)
- 8 - [2016-2020](#)

TEST MATCHES

- [1877-1900](#)

- [1981-1985](#)
- [1986-1990](#)
- [1991-1995](#)
- [1995-1999](#)
- [2001-2005](#)
- [2006-2010](#)
- [2011-2015](#)
- [2016-2020](#)

ALGORITHM FOR BATSMAN

Time Period Index

Assigned period wise weights to the runs of each player in a series.

Opposition Index

Calculated the weights based on the different conditions (Home/Away), (Strength of the opposition)

Series Percentile Value

$100 * (1 - (\text{position in series} / \text{total no. of players}))$

Result

The aggregate final set of the players
